

COBI - CobIT Implementation Methodology (Official Course by ITPreneurs)

Course Introduction

This 3-day course immerses participants in all aspects of managing an IT governance implementation and improvement program. The course covers the creation of an implementation roadmap and the change management activities and techniques that are necessary to improve IT governance. The course is designed using an engaging, scenario-based approach and includes interactive learning activities to teach a method to follow for ensuring successful outcomes. In addition, the participants benefit from the practical experience and knowledge provided in the course.

Course Objectives

- Understand how to position IT governance.
- Learn how to create the right environment for an IT governance implementation and how to initiate and implement a lifecycle approach.
- Understand how to identify key stakeholders.
- Comprehend how to identify the drivers for IT governance based on pain points and trigger events.
- Understand how to enable the organization to change its culture and way of working to successfully adopt better governance practices.
- Understand the implementation lifecycle of COBIT in context of implementing better IT governance, IT assurance, and security, risk or compliance management practices.
- Learn how to best plan and manage implementation phases using effective program management techniques.
- Assess the current IT governance process capability using COBIT maturity models.
- Analyze gaps in maturity and control, and plan improvements using maturity attributes, control objectives and control practices.
- Evaluate and consider practical implementation factors.
- Recognize how to integrate and adapt COBIT, VAL IT, Risk IT and other standards and best practices to support IT governance implementations.

Learning Level

- Expert

Course Duration

- 3 Days
