

## Course Introduction

Today's programming developer must be able to efficiently understand the concept of secure coding techniques to develop a secure application. In order to provide a total secure solutions from operating system level to application level. This course provides all those necessary skills for programming developer to understand how to write a secure PHP Application technique of major systems.

In this course, you'll learn current web application threats and how to add security to your PHP Web applications and PHP Open source CMS/Blog (Wordpress). It is assumed that you've been coding PHP Web applications for at least a year, so it won't cover the basics of the language (either conventions or syntax). The goal is to make you more aware of what you should be doing to secure the Web applications you're building.

## Course Objectives

Attendee of this program will have the knowledge and skills needed to meet the real-world challenges faced by programming developer. They can prevent suspicious activities that might compromise the system and application. A secure coding can provide an advance security on systems.

## Learning Level

- Advance

## Course Duration

- 5 Days (30 Hours)

## Prerequisites

- None

## Target Group

- Web application developer
- Software Quality Assuror
- IT Manager

## Course Outline

- Module 1: Introduction Web Application Security
- Module 2: Security Development Principles
- Module 3: Validation Data
- Module 4: Preventing SQL Injection
- Module 5: Preventing Cross-Site Scripting (XSS)
- Module 6: Preventing Remote Execution

- Module 7: Session Security
- Module 8: Securing your Applications
- Module 9: An Additional Protection PHP Application

### Recommended Courses

- JSP - How to Write a Secured PHP Code
- ASP - How to Write a Secured JAVA Code (J2EE)
- CSSLP - The Official CSSLP CBK Review Seminar (Accredited Training by ISC<sup>2</sup>)
