

Course Introduction

Today's programming developer must be able to efficiently understand the concept of secure coding technics to develop a secure application. In order to provide a total secure solutions from operating system level to application level. This course provides all those necessary skills for programming developer to understand how to write a secure ASP.net technics of major systems.

Course Objectives

- Graduates of this program will have the knowledge and skills needed to meet the real-world challenges faced by programming developer. They can prevent suspicious activities that might compromise the system and application. A secure coding can provide an advance security on systems.

Learning Level

- Intermediate

Course Duration

- 3 Days

Course Prerequisite

- SDLCF

Target Group

- Application Developer
- System Analyst
- Programmer
- Web Application Developer

Course Outline

Day 1

- Introduction
- Injection
- Cross-site scripting (XSS)
- Broken Authentication management

Day 2

- Insecure Direct Object Reference
- Cross-site request forgery (CSRF)
- Security Misconfiguration
- Insecure cryptographic storage

Day 3

- Failure to Restrict URL Access
- Insufficient Transport Layer Protection
- Unvalidated Redirect and Forward
