

Course Introduction

Cybersecurity is a growing and rapidly changing field, and it is crucial that the central concepts that frame and define this increasingly pervasive field are understood by professionals who are involved and concerned with the security implications of information technology. In this 2-days course, attendee will understand cybersecurity concepts, architecture principles, security of network, system, application, data and incident response process. Knowledge gained from this course is sufficient for taking the ISACA CSX Fundamental exam.

Course Objectives

- To understand cybersecurity concepts
- To understand cybersecurity architecture principles
- To understand security of network, system, application and data
- To understand incident response process
- To discuss about security of evolving technology

Learning Level

- Fundamental

Course Duration

- 2 Days

Target Group

- IT Manager
- Chief Information Security Officer
- Information Security Officer
- Security Architect
- Security Engineer
- Security Manager
- Security Consultant
- IT Auditor

Course Outline

Day 1
