

## Course Introduction

The term "information privacy" is broader than "information security". Other principles, for example, consent and choice, purpose legitimacy and specification, collection limitation, individual participation and access are included. Regulatory compliance (e.g. PDPA) might be a goal for some organizations, but implementing a compliance-based "information privacy" does not seem like a good practice. The internationally recognized "ISO/IEC 27701" allows you to build a risk-based privacy information management system in your organization. This 2-days course is led by an expert instructor with over a decade of experience and familiarity with the ISO resources.

## Course Objectives

- To learn information privacy risk management
- To learn "30+31+18" privacy controls
- To map between ISO/IEC 27701 and PDPA
- To explore resources on PIMS

## Learning Level

- Advance

## Course Duration

- 2 Days

## Course Prerequisite

- ISMSI

## Target Group

- Organizations aiming to comply with ISO/IEC 27701, Consultant, Auditor

## Course Outline

### Day 1

- The myths surrounding information privacy
